	Urgent	Not Urgent
Important	DO (MVP) ● Length check (flag passwords under 8 characters) ● Character variety check (uppercase, lowercase, numbers, symbols) ● Common password check (compare against a text file of popular passwords) ● Strength score + rating (Weak / Medium / Strong) ● Explain why it's weak and give tips to fix it ● Loop to check multiple passwords until the user types "quit"	SCHEDULE (V2.0+) ● Pattern detection (repeated chars like "aaa", sequences like "1234") ● Estimated time to crack the password ● Strong password generator ● Hide password input while typing ● Flag personal info (like a name or birth year) in the password
Not Important	DELEGATE (Use a library) ● Common password list → existing list from SecLists on GitHub ● Advanced strength estimation → zxcvbn4j library ● Secure random generation → Java's SecureRandom ● Testing → JUnit	DELETE (Cut it) ● GUI / desktop app ● Browser extension ● Saving users' passwords to a file (security risk) ● Checking if a password was leaked in a data breach (online API) ● AI/machine learning strength prediction
